Dallas Based Southwest International Freight Successfully Implements Trinium

PALOS VERDES, California – January 29, 2010 – Southwest International Freight, a leading intermodal trucking company based in Dallas, TX, has implemented the Trinium application. Southwest International Freight, provides transportation services to a wide variety of businesses in Dallas-Fort Worth and the Southwest. Trinium Technologies specializes in developing systems for intermodal and multimodal trucking companies of all sizes.

In addition to the base system, Southwest International Freight also purchased Trinium's Event Management Module, which automates customer notifications via email, and Trinium's Document Imaging Module. The integrated application will enable the company to reduce operating costs, grow their business without adding headcount, and improve their customers' access to data.

In selecting a software vendor, Southwest International Freight reviewed many systems before deciding on Trinium. "One of the key differentiators for us was the staff at Trinium, especially during the implementation process. Trinium's implementation staff really knows the intermodal trucking business and were able to work effectively with our people during the project," said John Jenkins, CFO at Southwest International Freight.

Next up for the company is to implement Trinium's cell-based mobile application to automate the dispatch process. "We're looking forward to the next steps with Southwest International Freight. The company is eager to improve their internal efficiencies and service to their customers through technology", said Dennis Lane, Vice President of Sales & Marketing at Trinium Technologies.
